

InvisiDye® UV MARKER

Solve Your Bird Problems Today

**It's what geese see that helps
keep them away!**

InvisiDye® UV Marker is a non-lethal UV (ultra violet) marker training tool that, when teamed with Avian Migrate® Goose and Bird Repellent, teaches geese and birds to avoid treated grass, plants and landscaping. How does InvisiDye® UV Marker work?

How does InvisiDye® UV Marker work?

By visually training birds to associate irritation with an area treated with a UV marker. Geese and other birds can see UV light waves (200-400mm) which allows them to see a portion of the light spectrum that is invisible to the human eye.

Features and Benefits

- Can be seen by geese and birds which includes a visual range between 200-400mm
- Works by giving geese a visual warning to avoid treated areas
- Apply in combination with Avian Migrate® Goose and Bird Repellent

Who uses InvisiDye® UV Marker?

Anyone who has a persistent bird problem such as geese or other birds that repeatedly feed or roost in the same areas.

- Airports
- Golf Courses
- Homes, Apartments & Condos
- Lawn Care Companies
- Horticulturalists
- Property Management Firms
- Schools and Universities
- Parks and Recreation
- Sports Fields
- Office Campuses

When do you apply InvisiDye® UV Marker?

You should apply InvisiDye® UV Marker in combination with Avian Migrate® Goose and Bird Repellent. This allows the geese and birds to immediately associate the repellent effects of the product with the color.

What rate do I apply InvisiDye® UV Marker?

Mix 2 oz of InvisiDye® UV Marker and 26 oz of Avian Migrate® with four gallons of water per acre for application solution. Treat areas where birds feed, roost or congregate according to Avian Migrate® Goose and Bird Repellent label instructions.
